

The right decision –
Quality for your safety

Quality you can rely on

What you can expect from Eco Analytics AG: More safety for people and the environment, products and services for all personal safety needs as well as state of the art emission and process measurement technology. **Everything from one source.**

Whatever you want to measure – We keep track

The safety requirements of the industry and the increasingly complex stipulations being set by the authorities call for a reliable partner, especially in the area of measuring technology.

Eco Analytics AG offers you an unparalleled variety of products and services in this field. They range from gas detectors to specific analysis for permanent emission measurement. Standard processes are, for instance, not helpful in case of toxic gases, since these must be captured and measured at very low concentrations.

With utmost precision, we can detect highly toxic gases (e.g. arsine, carbonyl chloride, hydrogen sulphide) as well as exotic gases up to the ppb range.

Our measurements – Your safety

Member of the Swiss Association of Installers of Security Systems (SES)

All services under one roof – With warranty

Eco Analytics AG is your specialist in all areas of gas alarm technology. No matter which phase your project is in – our support can help you. You will receive tailor-made and cost-efficient solutions by involving our specialists early on in the process. Besides consulting, system planning and engineering, we also offer maintenance contracts. Experienced repair and service engineers ensure continuous operation of all sensitive control systems.

Since we are 100% convinced of the functional capability of our systems we provide a performance guarantee. Our philosophy in a nutshell: We are only satisfied when you are.

Our services – The complete portfolio

- Site inspection
- Installation discussion
- Commissioning / Calibration
- System documentation
- Maintenance
- Troubleshooting etc.

Our products – Customised to your application

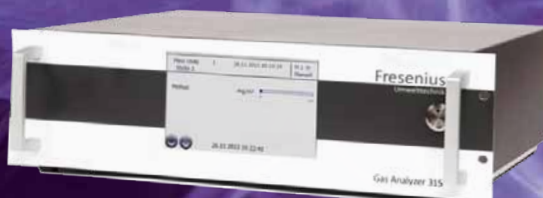

Our fixed gas alarm systems offer optimal safety for personnel and systems. Continuous analysis ensures the quickest possible hazard warning. Portable warning devices are carried on the body and warn directly of dangerous and polluted air. Be it fixed or mobile: Our devices when used, measure the air composition with the help of highly developed sensors and in case of danger, trigger optical and/or acoustic alarms.

Modern gas analysers are the mainstay of measuring technology. Whether fixed or as portable monitors: They are the basis of optimal analysis technology.

System solutions of Eco Analytics AG can also guarantee the safety of food material in protective packaging (MAP). Certified, of course!

Our product portfolio – The entire spectrum

- Gas detectors for combustible and toxic gases
- Gas monitors
- Monitoring centres
- Single or multiple gas alarm devices
- Emission and immission measuring devices
- Analysers for food technology etc.

Innovative safety – Across Switzerland

Due to both business locations, Eco Analytics AG is in the position to act quickly and flexibly.
Our employees are happy to help – just put us to the test.
